## 11.6. CÁLCULO DE ÁREAS

Seja  $f$  contínua em  $[a, b]$ , com  $f(x) \geq 0$  em  $[a, b]$ . Estamos interessados em definir a *área* do conjunto  $A$  do plano limitado pelas retas  $x = a$ ,  $x = b$ ,  $y = 0$  e pelo gráfico de  $y = f(x)$ .

## 2 Cálculo de áreas

$$a) x(3) - x(1) = \int_1^3 (2 - t) dt = \left[ 2t - \frac{t^2}{2} \right]_1^3 = 0.$$

Em  $[1, 2[$ ,  $v(t) > 0$ , o que significa que no intervalo de tempo  $[1, 2]$  a partícula avança no sentido positivo; em  $]2, 3]$ ,  $v(t) < 0$ , o que significa que neste intervalo de tempo a partícula recua, de tal modo que no instante  $t = 3$  ela volta a ocupar a mesma posição por ela ocupada no instante  $t = 1$ .

b) O espaço percorrido entre os instantes  $t = 1$  e  $t = 3$  é

$$\int_1^3 |2 - t| dt = \int_1^2 (2 - t) dt - \int_2^3 (2 - t) dt = 1.$$

Observe que o espaço percorrido entre os instantes 1 e 2 é

$$\int_1^2 (2 - t) dt = \frac{1}{2}$$

e que o espaço percorrido entre os instantes 2 e 3 é

$$\int_2^3 |2 - t| dt = -\int_2^3 (2 - t) dt = \frac{1}{2}.$$

## 11.7. MUDANÇA DE VARIÁVEL NA INTEGRAL

Veremos, no Vol. 2, que toda *função contínua* num intervalo  $I$  admite, neste intervalo, uma primitiva. Por ora, vamos admitir tal resultado e usá-lo na demonstração do próximo teorema.

**Teorema.** Seja  $f$  contínua num intervalo  $I$  e sejam  $a$  e  $b$  dois reais quaisquer em  $I$ . Seja  $g : [c, d] \rightarrow I$ , com  $g'$  contínua em  $[c, d]$ , tal que  $g(c) = a$  e  $g(d) = b$ . Nestas condições

$$\int_a^b f(x) dx = \int_c^d f(g(u)) g'(u) du.$$

### **3 Mudança de variável na integral**

$$\int_{-1}^0 x^2 \sqrt{x+1} \, dx = \left[ \frac{\frac{7}{2}}{\frac{7}{2}} - 2 \frac{\frac{5}{2}}{\frac{5}{2}} + \frac{\frac{3}{2}}{\frac{3}{2}} \right]_0^1 = \frac{16}{105}.$$

8. Um aluno (precipitado), ao calcular a integral  $\int_{-1}^1 \sqrt{1+x^2} dx$ , raciocinou da seguinte forma: fazendo a mudança de variável  $u = 1 + x^2$ , os novos extremos de integração seriam iguais a 2 ( $x = -1 \rightarrow u = 2$ ;  $x = 1 \rightarrow u = 2$ ) e assim a integral obtida após a mudança de variável seria igual a zero e, portanto,  $\int_{-1}^1 \sqrt{1+x^2} dx = 0!!$  Onde está o erro?

Seja  $c = u_0 < u_1 < u_2 < \dots < u_n = d$  uma partição de  $[c, d]$  e seja  $a = x_0 < x_1 < x_2 < \dots < x_n = b$  partição de  $[a, b]$ , em que  $x_i = g(u_i)$ , para  $i$  variando de 0 a  $n$ .

$$\Delta x_i = g'(\bar{u}_i) \Delta u_i$$

b) Conclua de (a) que

$$\sum_{i=1}^n f(g(\bar{u}_i)) g'(\bar{u}_i) \Delta u_i = \sum_{i=1}^n f(c_i) \Delta x_i$$

em que  $c_i = g(\bar{u}_i)$ .

c) Mostre que existe  $M > 0$  tal que

$$\Delta x_i \leq M \Delta u_i$$

para  $i$  variando de 0 a  $n$
